LEDGLO kit

Easy Stick down

CURV LEDGLO kit is a retrofit solution that transforms any of our **CURV READY SIGN** kits into an energy saving LED light box. This unique approach allows our signs to be converted to a light box even years later without removing it from the wall! It also ensures stock keeping and part logistics is kept to a minimum. The 12 Volt system comes with a water proof “plug-in” transformer that does not require a certified electrician to wire the box. The 12V LED modules and wiring is water proof and does not require a sealed enclosure. This unsealed open design approach also ensures that our light box solution does not become an unsightly bug trap like most other light box solutions. We do also stock optional cover strips that closes the open edges for a more conventional enclosed approach.

LEDGLO 10

Application:
Suitable for supplementing other kits
Adding LED modules (PS permitting)

Kit Content:
1.5w LED side Edge module - **10 off**
Cable accessories

LEDGLO 10 P

Application:
Suitable for small Ready Signs
